

WEST NILE VIRUS (WNV)

IN PENNSYLVANIA

WHAT MAKES YOU SICK?

Mosquitoes

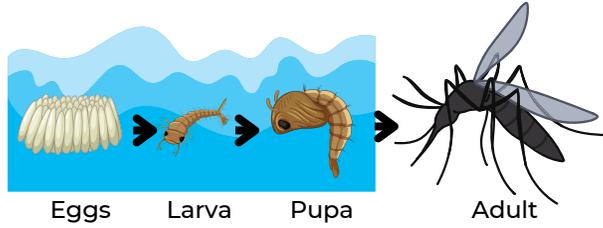

Culex pipiens mosquito

This is the mosquito that spreads WNV.

On average, there are 32 cases of WNV reported each year in Pennsylvania.

Mosquito Life Cycle

A mosquito can lay hundreds of eggs in one bottle cap of water

Mosquito Prevention

Dump it

Drain it

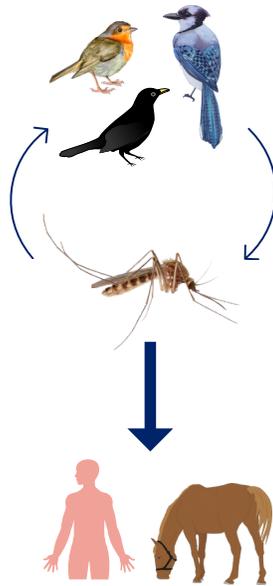

Treat it

Mosquitoes spend most of their life cycle in water. You can protect yourself and kill them before they become adults!

HOW IS IT SPREAD?

Step 1

Mosquito gets infected with WNV from an infected bird.

Step 2

Infected mosquito bites human, horse, or other mammal and infects them.

WHAT CAN YOU DO?

Watch for symptoms. Peak WNV season in Pennsylvania is summer/early fall.

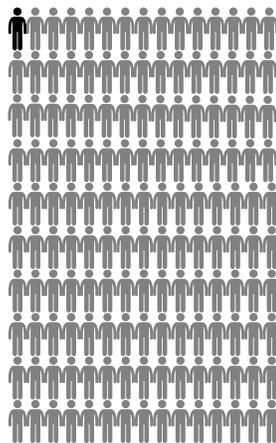

About 1 in 5 people infected will have symptoms of WNV

Febrile (Fever)

Illness

- Fever
- Headache
- Body aches
- Joint pains
- Vomiting and diarrhea
- Rash

About 1 in 150 people infected will become severely ill with WNV

Severe Illness

- High fever
- Headache
- Neck stiffness
- Stupor
- Disorientation
- Coma
- Tremors
- Convulsions
- Muscle weakness
- Vision loss
- Numbness and paralysis

Prevent Mosquito Bites

- Use EPA approved insect repellent
- Wear long sleeved shirts and long pants
- Use permethrin on shoes, clothing and gear
- Place screens in open windows, make sure screens do not have holes
- Use mosquito netting on strollers

WNV can be very serious. Talk to your healthcare provider if you have symptoms of WNV.
